About Me

I am a self-driven software engineer focused on software development, and AI-Based technologies. I enjoy solving complex problems, building practical systems, and continuously expanding my technical knowledge through projects and learning.

Skills

- AI Model Integration
- Systems & API Architecture
- CI/CD Pipelines & Automation
- Performance Optimization
- Team Management
- Client Negotiation
- Responsible and organized

Education

- **Self-Directed Computer Science Studies**
Active Computer Science (CS) Major Mid 2019 - Present
Self-directed education in Computer Science, building on early technical experience as Head of Robotics Programming during Junior High School. Continuing to develop my skills through Harvard University's CS50x, algorithmic problem-solving on LeetCode, and technical certifications from freeCodeCamp, with a focus on software engineering, data structures and algorithms, application security, and full-stack system design.
- **AMA Computer University System – SLC Campus**
Technical-Professional Track 2026 - 2028
Enrolled in the SHS Technical-Professional Track specializing in Digital Media & Animation (NC II). Combining foundational mathematics and applied sciences with digital media creation, asset pipeline management, and technical communication.

Experience

- **Freelance Web Developer**
Self-Employed 2020 - 2023
Built custom responsive websites (pharmacy platforms, client landing pages) using HTML5, CSS3, and ES6 JavaScript. Managed client communications, deployments, and site optimizations.
- **Web & API Developer**
Mozitech IT Solutions 2023 - 2024
Built the company's official website to establish their online digital presence. Developed custom APIs and backend to streamline site functionality, data handling, and overall system performance.
- **AI Software Engineer & Web Developer**
Wellfound & Fiverr Contracts 2026 - Present
Architected end-to-end full-stack applications for global clients using **Node.js**, **React.js**, and modern **CSS3 (2026)** standards, alongside **Python** for data processing. Engineered secure backend architectures and **REST APIs**, while enforcing application security standards, data protection protocols, and secure production deployments.
